Historical Evolution

Comments (11/29/19)

No news during November regarding the two main topics of this year within our space, Brexit and Trade Wars. December could be different as the UK is holding general elections on the 12th and the deadline for new US-China tariff increases is the 15th of December. During the month of November equity markets performed positively and we witnessed a generalized increase in both short term and long term Government Bond's yields.

Very stable month within our space, with no surprise in Central Bank's decisions, while activity data showed some improvement even at subdued levels.

We end the month with a positive performance of +0.6%. The biggest contributor to performance were long positions in NZD and on the negative side long positions in AUD.

Our main positions at the beginning of December are longs in AUD, EUR and GBP while shorts in CHF, USD and JPY.

Data Analysis

Time Period	Percentage positive return
Within 1 month	60.1%
Within 2 months	60.4%
Within 3 months	56.4%
Within 6 months	70.2%
Within 9 months	77.7%
Within 12 months	89.9%
