## Historical Evolution

## Comments (12/31/19)

During 2019 the main two uncertainties where the US-China trade war and Brexit. Precisely the former one has provoked a general deceleration in growth which has forced Central Banks to cut rates in a generalized way.

The uncertainty around Brexit was finally solved in December, after the overwhelming victory of the Conservative Party in the elections, which gained a majority to agree on the Brexit deal. The pound kept strengthening as the polls anticipated the results.

As well, trade war tensions were greatly reduced with the partial agreement reached by China and US in the middle of the month, which led to a general revaluation of AUD and NZD within our space.

December ends with a positive performance of 1.1%. The main contributors have been longs in AUD, NZD and GBP. Very little to say regarding negative contributions this month.

2019 has been a complicated year for our strategy as we witnessed the worst tail event in history by construction to our strategy. We are very satisfied with how risk management worked through the extreme event and understand the model is greatly reinforced, which makes us be very optimistic for the future.
